Smart India Hackathon 2026 | PS ID: SIH26262

PRAVAH-AICTE

Platform for Regulatory Approval, Vigilance, Automation & Handbook Compliance

Executive Summary & Vision

AICTE processes thousands of institutional applications annually across 9 Regional Offices under the Approval Process Handbook (APH)—covering Scrutiny, EVC, SAC/SHC, and time-bound undertakings. PRAVAH-AICTE replaces manual follow-ups and spreadsheets with a configurable, event-driven, tamper-evident regulatory automation platform.

Core Problem Addressed

- Manual tracking of multi-stage APH application movement across regions.
- SLA breaches in EVC scheduling and Expert Visit reporting.
- Lapsed conditional undertakings and unmonitored lease/document expiries.
- Lack of cryptographic auditability for appellate queries and RTI.

Core Design Principles

- **Handbook-as-Data:** Rules, SLAs, and offsets are versioned JSON configuration, not hardcoded logic.
- **Crash-Proof Sweeper:** Deterministic database-driven sweeper guarantees zero missed alerts.
- **Strict HITL Guard:** Automation assists and routes, but statutory decisions require human step-up auth.

Key Value Proposition

PRAVAH-AICTE combines a zero-code APH workflow engine, real-time pendency command center, automated EVC queueing, undertaking compliance ledger, AI-assisted lease monitor, and a hash-chained audit trail into a single unified platform.

Technical Approach: Modules A through F

The platform is architected into six robust, decoupled modules built on Next.js 15, NestJS, PostgreSQL, Redis/BullMQ, and XState v5.

A. APH Workflow Engine

Versioned JSON definitions generate XState state machines. Handles dynamic track assignment (*Only Scrutiny, Scrutiny+EVC, EVC+SAC/SHC, Only EVC*), authorised deficiency reverts with structured reason checklists, and automated case summary generation.

B. SLA & Pendency Command Center

Working-day SLA calculation with Holiday Calendar support and pause/resume mechanics. Thresholds (Green <75%, Amber 75-99%, Red 100-124%, Critical ≥125%) drive automated reminders and multi-tier escalations.

C. EVC Queue & Scheduler

Auto-enqueuing post-scrutiny with transparent priority scoring. Supports Physical, Online, and Hybrid modes (per Dec-2025 corrigendum), conflict-of-interest checks, scheduling calendars, and overdue escalation tracking.

D. Undertaking & Compliance Ledger

Conditional approvals automatically generate tracked undertaking records. Features secure evidence uploads, officer verification workflows, and escalation paths leading to show-cause review queues.

E. Document Validity Monitor

Tracks lease deeds, fire safety, and FDRs. Combines deterministic regex extraction with OCR fallbacks, requiring mandatory human confirmation before setting expiry deadlines and flagging compliance deficits.

F. Notifications, Reports & Audit

Event-driven alerts across In-App, Email, and SMS (EN/HI). Six comprehensive reports (R1–R6) with XLSX/PDF exports, backed by a per-stream SHA-256 hash-chained immutable audit trail.

Process Flow & System Architecture

End-to-end data flow ensures complete visibility from institutional submission to final statutory review.

Architecture Layers

- **Presentation:** Next.js 15 App Router (Role-based portals for Institutions, Scrutiny Officers, EVCs, Regional Desks, Bureau HQ, and Admin Configurator).
- **Backend & Workflow:** NestJS (Fastify) with XState v5 workflow engine and json-rules-engine.
- **Asynchronous & State:** Redis + BullMQ for reliable delivery, idempotent sweeper for deadline checks.
- **Storage & Security:** PostgreSQL 16 (Prisma ORM, scoped clients), MinIO SSE-encrypted vault, ClamAV malware scanning.

6-Step Core Lifecycle Flow

Step	Action	System Automation & Safeguard
1. Intake	Application submission via portal/bulk import.	Rules engine assigns workflow track; SLA working-day clock starts.
2. Routing	Scrutiny officer reviews or reverts for deficiency.	Revert pauses officer SLA, opens institution checklist, notifies instantly.
3. EVC	Inspection scheduling and report submission.	Auto-enqueues into Regional EVC queue; tracks visit and report deadlines.
4. Decision	Competent Authority statutory review.	**Strict HITL Guard:** Blocked for system actors; requires human step-up auth + remarks.
5. Compliance	Approval with conditional undertakings / lease checks.	Undertaking ledger and document watchers initialized automatically.
6. Vigilance	Continuous monitoring and escalation.	Idempotent sweeper triggers tiered reminders and audit log writes.

Feasibility, Viability & Risk Mitigation

PRAVAH-AICTE is built on proven enterprise open-source technologies, ensuring rapid deployment, high scalability, and robust security.

Technical & Operational Viability

- **Tech Stack:** Next.js, NestJS, PostgreSQL, Redis, MinIO, Docker — entirely containerized via Docker Compose (`make up`).
- **Integration Path:** Standardized adapter layer, OpenAPI 3.1 specs, webhooks, and Excel bulk-import templates for legacy onboarding.
- **Security & Hosting:** Designed for MeitY-empanelled / NIC cloud with India data residency, RLS data scoping, and DPDP Act alignment.

Risk Register & Mitigations

- **APH Rule Changes:** Mitigated by the No-Code APH Policy Configurator with versioning and dry-run impact simulation.
- **Alert Fatigue:** Mitigated by officer daily digests, deduplication keys, and acknowledgement-based escalation loops.
- **OCR Extraction Errors:** Mitigated by treating AI extraction as advisory with confidence scores and source highlighting; officer confirmation is mandatory.

Scalability & Performance Targets

Tested for dashboard aggregates of **p95 < 1s across 50,000 synthetic applications**. Indexed `nextAlertAt` queries ensure $O(\text{due items})$ database performance, easily handling peak annual approval loads.

Novelty, USP & Regulatory Safeguards

What sets PRAVAH-AICTE apart is its uncompromising balance between deep automation and regulatory accountability.

Key Innovations & USPs

- **Handbook-As-Data Configurator:** Update APH rules, SLAs, and templates instantly without code deployments.
- **Crash-Proof Deadline Engine:** Deterministic sweeper with catch-up logic; survives server crashes and 24-hour outages with zero missed alerts.
- **Transparency & Explainability:** Every routing track, priority score, and extracted lease date exposes its decision rationale.

Enforced Regulatory Safeguards

- **Human-in-the-Loop (HITL):** State machine physically blocks system actors from taking statutory actions. Approvals require authorized human login + TOTP step-up + remarks.
- **Tamper-Evident Audit Trail:** Per-stream SHA-256 hash chains with DB-level immutable triggers and daily Merkle root anchoring. Detects any record edit or truncation.

Live Evaluation Proof Panel

Includes a dedicated **Proof Panel** view for evaluators to verify alert timeliness, missed-deadline counts (=0), audit chain validity, and SLA statistics in real-time during the demo.

Impact, Outcomes & References

Measurable operational transformation for AICTE Regional Offices and Bureaus.

Measurable Impact & Benefits

- **Elimination of Manual Follow-Up:** Automated reminders and escalation ladders replace manual calls and spreadsheets (tracked via "follow-ups avoided" counter).
- **Zero Missed Expiries & Breaches:** Proactive tiered countdowns ensure 100% compliance on undertakings and lease renewals.
- **Optimal Staff Utilization:** Administrative routing and draft summaries free officers to focus strictly on regulatory scrutiny.

Evaluation Scorecard Alignment

- ✓ Workflow Accuracy (Golden-path tested)
- ✓ Timeliness of Alerts (Measured lag < sweep window)
- ✓ Deadline Reliability (365-day simulation verified)
- ✓ Pending Case Visibility (HQ Command Center)
- ✓ Complete Audit Trail (Hash-chained verification)
